

**PICO ENERGY**  
Petroleum Services & Investments

Gas Production  
Technologies &  
Solutions

## **NOT A CHOICE**

To get rid of or flare large quantity of Gas nowadays

## **NO MORE POLLUTION (ENVIRONMENT FRIENDLY)**

Our mission is to stop harming the environment with emissions resulting from continuous Gas Flaring. Our Goal is to save our planet and operate friendly to the environment

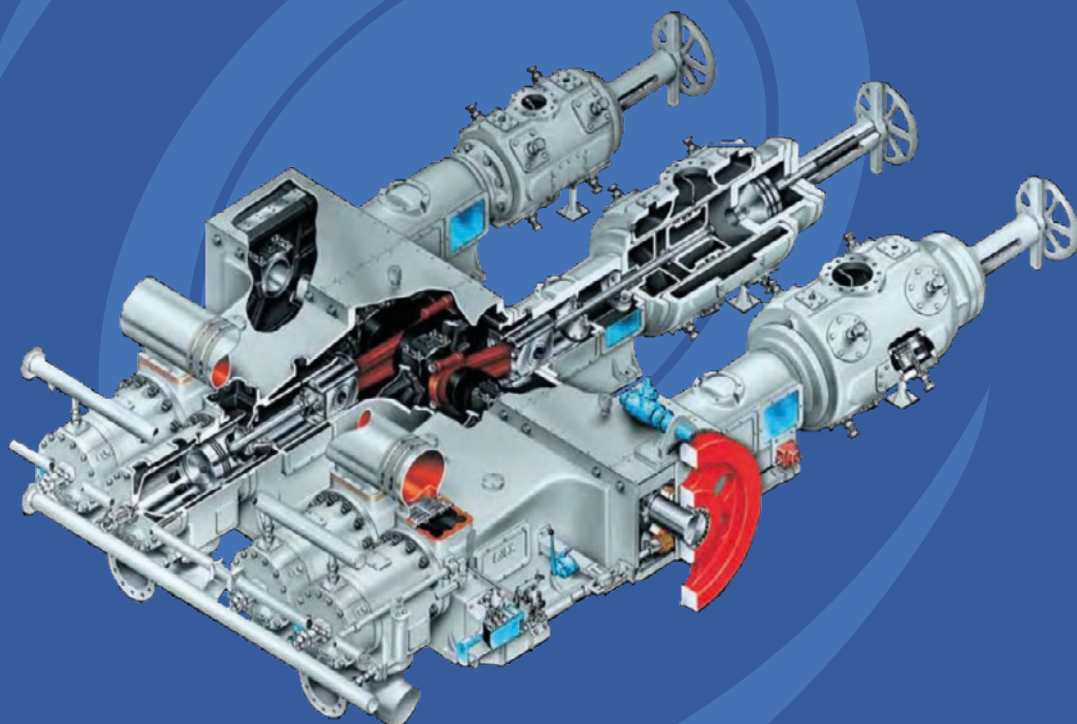

## **NO MORE ENERGY LOSS (INCREASE PRODUCTIVITY AND COST SAVING)**

Our economy in urgent need to save every penny and use all our resources effectively while increasing productivity

# 1- GAS Compressing Services

## Supply and Tailor Facilities with Compressors Packages

PICO Energy is targeting to minimize the Flared Gas by operating our new fleet of Gas Compressors which covers wide range of Pressures and Flow rates. Our solutions are tailored to fit our clients' requirements and operating conditions. PICO Energy is engineering, delivering, installing, and commissioning the facility with compressors in the shortest delivery time including all construction and fabrication activities

## **Our Compressors have wide Range of POWER, Suction and Discharge PRESSURE**

Our fleet is available up to 845 horsepower (630 kw) and capable of handling a wide range of pressures, from vacuum to 5500 psi, offers up to six ratios capability and the lowest BHP per million flows for a wider range of applications, including sour gas.

## **High Operating AVAILABILITY and Decreasing Downtime**

Our Continuous Goal is always achieving High Operating Availability more than 98 % and decreasing downtime and Maintenance Time.

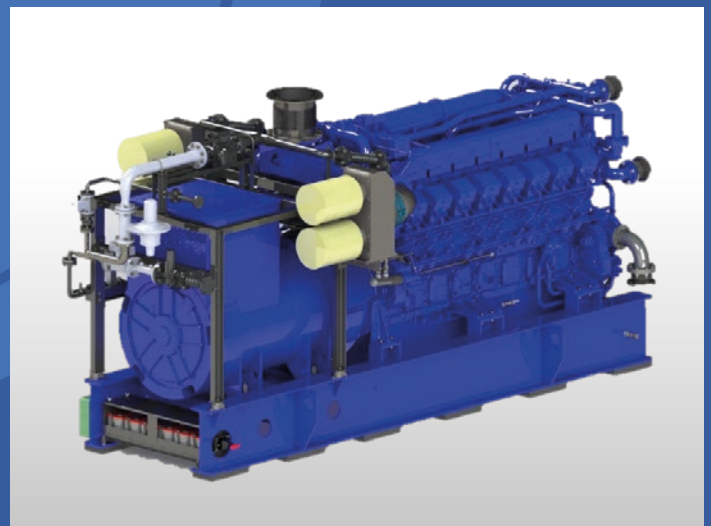

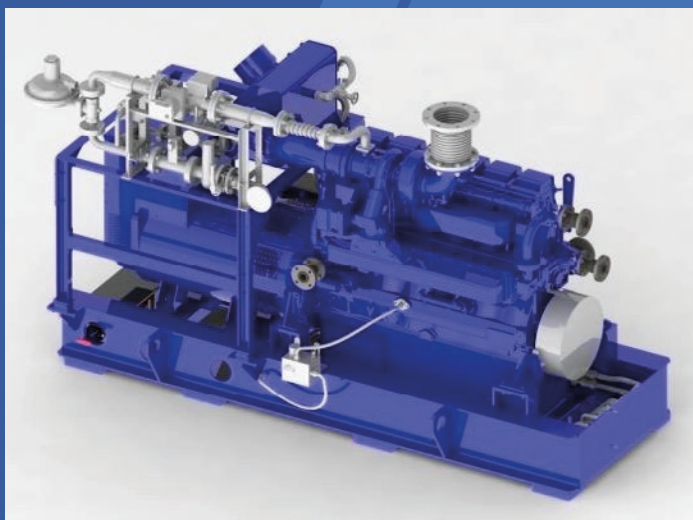

## **SMOOTH OPERATION: SPARES AND MAINTENANCE**

We grantee Huge Stock of Spare Parts and Consumables to secure our compressor Operating Lifetime, Availability and Efficiency. We apply Detailed Maintenance Program with high experienced team to keep our compressors running smoothly with minimum NPT.

## **2- GAS Generators**

Every Scf of Gas is being used to generate Power and electricity with Wide Range of Gas Generators Sets: 0.5, 1 and 1.5 Mega Watts to increase productivity and implement cost saving philosophy.

### 3- Gas Injection / Gas Lift

In the Oil Industry, Gas Injection and Gas Lift are performed when the Associated Gas is been used and re-injected into the well, to increase pressure, thereby Stimulate and enhance production and increase recovery from existing reservoir. PICO Energy doesn't provide just a service but partnership and integrated solutions to use the gas effectively and avoid losing or flaring it
